▶ **COSMA SPREADING OIL AND STAIN**

Cosma's purpose-built machines spread the oil and stain evenly across the surface of the wood. The padbrush and cylindrical brush absorb any excess material to ensure that the correct amount is applied. Surface texture, desired color and (protective) layer thickness play an important role in achieving the required result. For structured wooden floors, Cosma has developed the padbrush which ensures that the oil penetrates deep into the wood.

**▶ COSMA CYLINDRICAL & PAD BRUSHES
FOR PARQUET FINISHING MACHINES**

In the production of products such as wooden floors or stairs, oil is applied with a roller coater. The pad and cylindrical brushes (made of a combination of natural fibers and synthetic filaments) spread the oil evenly over the surface.

▶ **COSMA PADBRUSHES FOR PARQUET
FINISHING MACHINES**

Specially developed for spreading oil on distressed wooden floorings. Due to the special mix of nylon filaments and natural fibers the padbrushes achieve a much better spreading and penetration of the oil into the wood.

▶ THE ADVANTAGES

- ✓ Get an excellent and **better-looking finish** on your wooden floorings and parquet
- ✓ **Modular** concept: you can add it to your production line or replace your current unit
- ✓ The brushes assure an even finish all over with just **one-way through** with the right amount of oil, thus **reducing oil waste**

PRODUCTION

▶ **COST SAVING & SUSTAINABILITY**

- ✓ Re-use the Cosma brushes over-and-over with the **Cosma Brush Cleaning unit**
- ✓ Eliminate the purchase of replacement pads
- ✓ Reduce the large amount of garbage waste caused by the used pads
- ✓ Padbrushes last up to **300 times** longer than traditional pads
- ✓ Less transport costs
- ✓ The cylindrical brushes and padbrushes work also with **renewable natural fibers** from an agave plant whilst traditional pads are completely produced from synthetic material
